

ANT ACCRAS

Far more than simply an electronic accident book, ACCRAS lets you record as much or as little information about each incident as you need, and gives you the ability to quickly and easily spot trends as they occur, helping prevent future accidents

ANT ACCRAS

ANT ACCRAS, designed and developed by Advanced New Technology and distributed and supported by Ravensfield is a simple and highly cost effective way to manage your incident and accident recording.

Designed to comply with the requirements of RIDDOR 95, ACCRAS allows you to quickly and easily create accident records. And, more importantly, you can get to those records at the click of a button to spot trends early, pick out common causes, and put measures in place to prevent accidents happening.

Lost time, investigations, insurance claims and litigation are all time consuming and very expensive. ACCRAS gives you the evidence you need to minimise their impact on your organisation.

Time and again, Health & Safety Managers tell us that the biggest single problem they have with paper accident report forms is missing or inaccurate information, Not only does this waste

time and money, but it can also delay investigations and hold up improvement plans.

With ACCRAS, this is a thing of the past. De-

sign your own on-screen form using look-ups and mandatory fields, and you can be sure that all the accident reports you receive will be accurate and complete - first time.

- **Flexible** Create your own fields, screens and reports. Use your terminology and industry specific recording and reporting criteria
- **Functional** Widely used in the public and private sectors, local government, healthcare, transport, utilities, construction and manufacturing
- **Consistent** User defined rules and look-up tables ensure that results are always consistent and accident forms are complete
- **Investigations** Detailed user defined investigation capability. Investigations can be undertaken using the ACCRAS PDA module
- **Risk Matrix** Allows you to calculate a risk score for each accident and define relevant remedial actions based on risk score
- **Scalable** Single user to 100 users, server or web based, Microsoft Visual FoxPro or industry standard SQL Server
- **Reporting** Comprehensive standard reports and graphs and an easy to use custom report generator. ACCRAS also has its own F2508 template
- **Visual** Attach photos, sketches and drawings to results. Add notes and attach documents. All reports can be produced as PDFs to cut down paper usage.
- **Secure** Control each user's access rights so confidentiality of accident data is always maintained

ANT ACCRAS

Accident and incident recording & analysis made easy

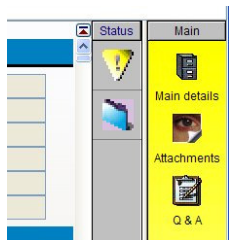

ANT ACCRAS

A RIDDOR compliant accident and incident recording and reporting system designed to help you comply with legislation and lessen the risk of accidents happening

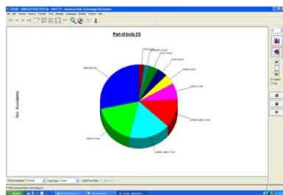

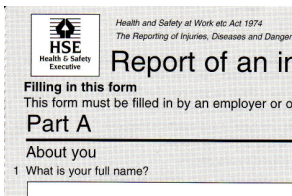

ANT ACCRAS

The Record Enter as much or as little information as you need for each record. At one level, you can simply enter basic information about the injured person, the injury and where and when it happened. At the other end of the scale, you can record a wealth of detail including shift patterns, job or task related factors, PPE, training issues and witness statements. You can also attach pictures and other external documents, so that all the information you need is always at hand. And if necessary, you can carry out a full scale investigation.

Your Results As we've said before, there's not a lot of point in collecting lots of data if you can't do anything with it. ACCRAS's comprehensive search and reporting capability lets you find and analyse your data quickly and easily. You can perform detailed on-screen enquiries, design your own report layouts, produce statutory reports or present information graphically to get your message across effectively. If the information's there, you can use it. It's that simple.

ANT ACCRAS

is part of the ANT FM family of modular health & safety and facilities management solutions

ANT Auditor

Powerful and very flexible PDA based Audit and Risk Assessment system
