

ANT Auditor

The power behind all your audits and risk assessments

Feature rich yet surprisingly easy to use, ANT Auditor provides the complete audit and risk assessment toolkit, from question set-up through data collection and reporting to a timed and traceable action plan

ANT Auditor

ANT Auditor, designed and developed by Advanced New Technology and distributed and supported by

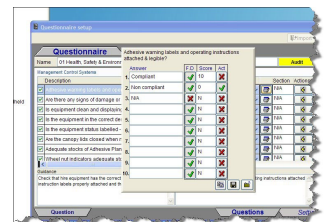

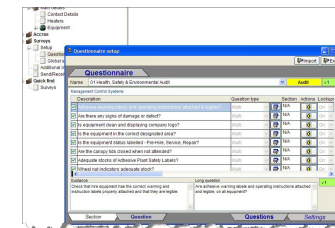

Ravensfield is the way forward for all your audits and risk assessments. Using the latest PDA and desktop technologies, ANT Auditor is designed to put you in control. We strongly believe that there's no point in collecting information just for the sake of

it, and with all the features you expect, from inbuilt user guidance notes to detailed action plans, ANT Auditor lets you get at and analyse your valuable data fast.

The Questions

You've got complete control over your question sets. Create a new one from scratch or modify an existing one. Define scoring schemes and trigger points for actions, Set KPI and failure levels, and define individual or global sets of supplementary information relevant to your business or to an individual audit. Create your own guidance notes, and set the rules about mandatory and non mandatory questions, and you control

where photos, notes and sketches can be added. You can even create rules about revisit dates, use "traffic light" indicators for results and set up mailing lists so that action plans can be emailed direct to the right person within minutes of completing the audit while they are still fresh in everyone's mind.

- **Flexible** Create your own question sets or choose from a standard library. Define the rules behind the questions to get the results you need
- **Functional** Used in the public and private sectors, local government, healthcare, transport, utilities, construction and manufacturing
- **Consistent** User defined rules and look-up tables ensure that results are always consistent and nothing has been missed
- **Actions** Generate automatic actions for non-conformances based on answers to questions. Actions can be timed and have a designated responsible person
- **Scalable** Single user to 100 users, server or web based, Microsoft Visual FoxPro or industry standard SQL Server
- **Reporting** Comprehensive customisable audit report plus a wealth of standard reports and a custom report generator and graphical drill-down tool
- **Portable** Almost any Microsoft powered device, from standard PDAs and smart phones to IP54 rated industrial units and ATEX Zone 1, Zone 2 and Mines units
- **Visual** Attach photos, sketches and drawings to results. Add notes and attach documents. All reports can be produced as PDFs to cut down paper usage.
- **Secure** Control each user's access rights

ANT Auditor

ANT Auditor

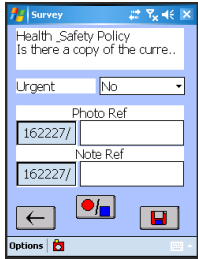

A powerful portable and flexible Web and PDA based system for auditing and risk assessments, designed to optimise productivity and increase effectiveness

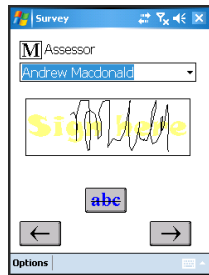

ANT Auditor

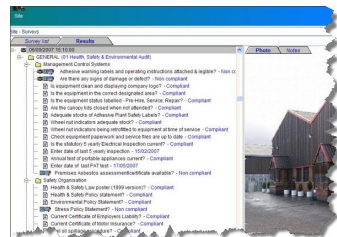

The Task Using the latest touch screen PDAs and mobile data terminals, carrying out audits and assessments could not be easier. Simply tap and select and ANT Auditor will guide you painlessly through the process. And you're not just answering the questions, you're also creating actions and assigning timescales and

responsible people at the same time. Don't forget that photographs and sketches are a great way to provide more in-depth information, and ANT Auditor lets you add both of these easily, and you can take extra notes at any point during the process. You can even collect signatures as you go.

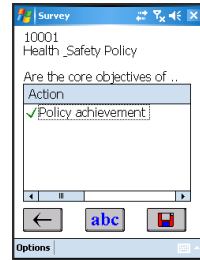

Results Easily view summary or detailed results on screen. Use ANT Auditor's powerful search and

drilldown facilities to analyse results over time, by site, by question, by action status, in fact almost any way you want. And because the faster you can get the results and action plans to the people who need them the faster issues are resolved, ANT Auditor's comprehensive array of reporting options, including standard reports and easy to use report generators lets you produce all the reports you need, from top level executive summaries to very detailed action plans, in minutes, and no wasted paper.

Actions Create a detailed action plan as you go round. Non conforming answers can be set to

automatically create actions with time frames and responsible people, and again, notes, photographs and sketches can be added to provide as much information as possible. Once created, ANT Auditor allows you to quickly and easily follow up and monitor all actions. Detailed action plans can be prepared in minutes for each site, including graphs, pictures, procedures and guidance notes. ANT Auditor's comprehensive and detailed Actions function gives you the ability to measure improvements at the click of your mouse.

We'll work with you We won't just

supply ANT Auditor to you, we'll install it and train you and your staff to get the most out of it, and we can offer a cost effective maintenance contract to keep you up to date and ensure you get the support you need when you need it.

See for yourself Don't take our word for it - contact Ravensfield now to arrange your own on-site demonstration:
