

Burning Issues Cooled with ANT AUDITOR & ANT INSPECTOR

“Fire is a devastating event both in terms of life safety and business continuity. New Fire Safety legislation, being introduced in 2006, will see the end of the Fire Precautions Act to be replaced with a risk based approach for the future.

Fire Risk Assessment & Audits with ANT AUDITOR has provided Southern with a management system that ELIMINATES all non essential paperwork and AUTOMATES control measure and actions designed to reduce the risk of fire.

Southern, having over 160 stations, 3 maintenance depots and numerous offices and other workplaces around London and the Southeast, required a system that was user friendly, fast and reliable, and which shared information quickly and effectively. ANT AUDITOR delivers!

ANT INSPECTOR is being used by Southern to maintain effective management of fire extinguisher maintenance and record keeping for its 3,500 pieces of equipment.

It uses the latest hand held technology, with laser barcode scanning and simple, user friendly software. It eradicates time consuming paperwork, optimises technician time in carrying out essential maintenance and testing. It also provides a powerful reporting package designed to identify equipment by size, weight, location, manufacturer, medium, last inspection, next inspection, discharge date, hydrostatic discharge date and much more.

This flexibility enables Southern to pro-actively provide detailed costings for maintenance and accurate timescales for replacement of redundant, time expired equipment and to ensure compliance with legislation”

Ross Thornton - Fire & Safety Planning Manager - Southern

Southern is a train operating company managing a mix of suburban commuter and mainline routes between London and the South East Coast, providing train services through South London, Surrey and East and West Sussex, and to parts of Kent and Hampshire
